

Bravo Easy Espresso

BRV-EE

W = 12.5
D = 13.5
H = 16.0

This espresso machine is a small but complete semi-professional machine that can be widely used in offices, and at home

The machine features 2 separate internal boilers. The larger stainless steel boiler (1.1lt.) permits large steam production, which is especially useful with the Automatic Milk Foamer. The smaller boiler (0.25lt.) delivers the coffee and hot water.

The standard version comes with the automatic foamer and the easy to use espresso pod systems. On request this machine can be converted to use freshly ground coffee.
