

COFFEE MAKERS FOR GLASS AND THERMOS JUGS

Animo[®]

Coffee Convenience

Aromatic B-range

The Aromatic B-range

Do you also enjoy the pleasure of a nice cup of freshly brewed coffee? Coffee must be fresh and its aroma should be optimal. This demands much of your coffee maker. That is why you use high quality coffee makers of Animo!

Convenient coffee brewing

Special feature of the Aromatic B-range is the ingenious open boiler brewing system. The brewer is less susceptible to scale deposit and can be descaled easier. This makes the brewer perfect for hard water areas.

All brewers of the B-range are made of stainless steel. The coffee machines are suitable for extra fine ground coffee and are standard equipped with a dry-boil protection.

Aromatic B 100

The coffee brewer B 100 enables you to brew fresh coffee directly into a glass jug easily and quickly. The brewing time is about 6 minutes for 1 jug of fresh coffee. The B100 is a coffee brewer with manual filling. The two enamelled hot plates ensure that the coffee is always at the correct temperature.

Aromatic TVB 100

The coffee brewer TVB 100 is designed to brew fresh filter coffee fast and directly into a thermos jug. It is not necessary to pour the coffee into another thermos jug, so there will be no loss of temperature or flavour. The brewer is adjustable in height and is therefore compatible with most thermos jugs.

Filter paper and cleaning accessories

The Animo range also includes accessories for your B-range brewer such as filter paper 90/250, coffee fur remover and descaler (available in sachets or in bulk).

Extra jugs of coffee can be kept at the correct temperature with the warming plate type A22.
